

ServiceCase SCBA Pro

Test kit for the precise analysis of the cleaning bath

Part number: 090582-H400

ServiceCase SCBA-Pro is a test kit for the precise analysis of the cleaning bath, which allows a very precise evaluation of the condition of a **kolb** detergent using various measurement methods. This test kit can help to maximise the bath life of a detergent and thus increase cost efficiency..

With the help of the recommended setting/analysis tabulation of **kolb** and the 3 main indicators - pH-value, refraction index and conductivity in μS - the operator is able to analyze his cleaning process.

Case content

pH / μS measuring meter

Refraction index meter

Total hardness test

pH Sticks

SCBA Pro allows the following measurements:

- ☐ Conductivity in μS (max. measuring range 1999 μS)
- ☐ Refraction index / brix
- ☐ Total hardness
- ☐ pH-value
- ☐ TS- Ternary Sequence demo tool (upon request)
