

pHSticks

pH indicator strips for all media used in environmental analysis and control of media used in industrial processes.

Part No. 090603 // Contents: 100 strips

CLEANING TECHNOLOGY
Made in Germany

Application overview

The pH value of a sample can be determined quickly and easily directly on site. The strips can be used immediately at any time. The measuring strips enable a fast, approximate (tolerance: $\pm 0.5 - 1$) assessment of the pH value, e.g. in the cleaning medium or rinsing water.

Measuring range: 0 -14

The test samples are not contaminated by the indicator dyes. Thus, the solutions can be used for further analyses. The colors of the individual color fields cannot merge. This allows a more accurate comparison with the color scale.

The length and stiffness of the plastic strips prevent your fingers from coming into contact with the test solution.

Usage: Single use per strip
