

Campus S – Key Facts

Complementary training

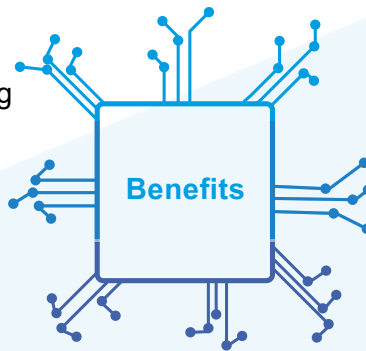

General

Campus S is a user training to optimize the profitability of your **kolb** cleaning system – ideal if you want to make yourself and your team fit for a more efficient and sustainable operation in addition to the practical installation training or retraining.

Focus on a comprehensive understanding of your cleaning system

Increased efficiency and sustainable daily operation

Modern training structure

Efficient, uncomplicated and time-saving retraining

Independent and qualified maintenance work

Theory

The theory parts of the Campus S training program are completed online via an e-learning portal. You decide how long and how quickly you complete them. We recommend completing them before the practical part with a minimum target achievement of 65 %. As soon as you have successfully completed the theory parts, you will receive an official confirmation of your learning success.

Practice

The practical part of the Campus S training program takes place as part of a practical installation training or retraining directly on your **kolb** cleaning system in your company – carried out by a certified **kolb** service trainer. You will receive a detailed, system-related process description after commissioning.

Certificate & handout

A digital handout and a certificate of attendance will be provided to you at the end.

Participation fee

440 € for the theory parts (e-learning).

The costs for the practical **initial installation training** are included in the offer for your **kolb** cleaning system and will be invoiced accordingly. Costs for the practical **retraining** depend on your **kolb** cleaning system. Please contact Campus Service for an individual offer.

Campus S – Theory & Practice

Time required: approx. 8 hours

T/1 Special knowledge | Initial installation

- Aligning
- Connecting
- Filling

E/C Excursus | Analytical methods for cleaning chemistry
