

X-Power unit

Extra-power pump unit for increased liquid volume and spray pressure

Part number: 0905AQ5x-9XP

Application

When cleaning PCB assemblies, especially with closely packed and / or a large number of fragmented layers and structures or screens and stencils with densely crowded small apertures, it may be necessary to increase the spray and volume pressure with an high-power pump unit.

This shortens the cleaning time and increases the cleaning efficiency of complicated built, fragmented products.
